The new Porsche 917 has a larger 4.5-litre 12-cylinder engine with horizontal cylinders. Unlike the 908's boxer crankshaft, the 917's engine uses a shorter crank similar to those in "V" engines to reduce the motor's footprint. 1969 April 22.

This 108 page book tells the story of the Porsche 917, 956 and 962 racing cars that were so successful at Le Mans. Great technical information on the Porsche 917's engine and detailed race records for the cars are also included.

The story of the Porsche's development of the 917 is a rich account of how a small but dedicated band of engineers undertook to produce a race car that went on to set records that to this day have not been bettered. Designed to win the world-famous Le Mans 24 Hours race, Porsche finally stepped into the big time of international auto racing with its Type 917 in 1969. Its phenomenal air-cooled flat-12 engine powered the 917 to 15 wins in world sports-car championship races from 1969 to 1971

Online Library 917 Porsche Engine

including two wins at Le Mans in 1970 and 71, after which it was outlawed by a rules change. First built in a series of 25 coupes that Volkswagen chief Ferdinand Piech called the biggest risk he's ever taken in business, the 917 was raced in both short- and long-tailed forms. Today the Porsche 917 is recognized as the car that ended Porsche's underdog status in international motor sport.

During the mid-1960s Porsche decided that if it was to enjoy outright success at Le Mans (rather than class wins) it would need a car somewhat larger and more powerful than those it already had. It was time for something completely different. It was time for the Type 917. Mid-engined like so many earlier Porsches, it had a 12-cylinder air-cooled boxer engine that produced 580 bhp from 4.5 liters when first announced in 1969. After a period of "development" in 1970, the 917 became almost unbeatable, winning at Le Mans and virtually every other circuit. By 1972 the 917 was enjoying success in the hugely popular Can-Am series in America with a turbocharged 5.0 liter engine of 950 bhp and later a 5.4 liter unit that produced over 1,000 bhp! The hero driver was usually the late Mark Donohue. Later came the 935, 956, and the evergreen 962 that enjoyed a race-

winning life of many years, way beyond the normal two or three years.

Data for the Porsche 912 Series engine. Includes compression ratios, torque settings, camshaft settings, firing order and lubrication diagrams for the Porsche 917 race car.

After knocking on the door for decades, Germany's Porsche finally stepped into the big time of international auto racing with its Type 917 in 1969. Its phenomenal air-cooled flat-12 engine powered the 917 to 15 wins in world sports-car championship races from 1969 to 1971, after which it was outlawed by a rules change. Included were two wins at Le Mans in 1970 and '71. First built in a series of 25 coupes that Volkswagen chief Ferdinand Piech called the biggest risk he's ever taken in business, the 917 was raced in both short- and long-tailed forms, pumping out 630 bhp by 1971. It went on to even greater glory in turbocharged roadster form in Can-Am racing as the 917/10, series champion in 1972. In '73 the incredible 1,000-horsepower 917/30 Porsche dominated the Can-Am series in the hands of Mark Donohue, who called it "the perfect racing car". The 917 stands proud in Porsche's history as the costly and daring machine that decisively ended the company's underdog status in international motor sport.
