10.9 Development and Regeneration of  
Muscle Tissue . Muscle tissue arises from  
embryonic mesoderm. Somites give rise to  
myoblasts and fuse to form a myotube.  
The nucleus of each contributing myoblast  
remains intact in the mature skeletal  
muscle cell, resulting in a mature,  
multinucleate cell. Satellite cells help to  
repair skeletal muscle cells.

Neuro-Otology: a volume in the  
Handbook of Clinical Neurology series,  
provides a comprehensive translational  
reference on the disorders of the peripheral  
and central vestibular system. The volume  
is aimed at serving clinical neurologists  
who wish to know the most current  
established information related to

## Dizziness and Disequilibrium from a

clinical, yet scholarly, perspective. This handbook sets the new standard for comprehensive multi-authored textbooks in the field of neuro-otology. The volume is divided into three sections, including basic aspects, diagnostic and therapeutic management, and neuro-otologic disorders. Internationally acclaimed chapter authors represent a broad spectrum of areas of expertise, chosen for their ability to write clearly and concisely with an eye toward a clinical audience. The Basic Aspects section is brief and covers the material in sufficient depth necessary for understanding later translational and clinical material. The Diagnostic and Therapeutic Management section covers all of the essential topics in the evaluation and treatment of patients with dizziness and disequilibrium. The section on Neuro-otologic Disorders is the largest portion of

the volume and addresses every major diagnostic category in the field.

Synthesizes widely dispersed information on the anatomy and physiology of neuro-otologic conditions into one

comprehensive resource Features input from renowned international authors in basic science, otology, and neuroscience

Presents the latest assessment of the techniques needed to diagnose and treat patients with dizziness, vertigo, and

imbalance Provides the reader with an updated, in-depth review of the clinically relevant science and the clinical approach

to those disorders of the peripheral and central vestibular system

Market: First Year Medical students,  
Nurse Practitioner students, and Physician  
Assistant students Topics covered will be

Muscle and Exercise Physiology is a comprehensive reference covering muscle and exercise physiology, from basic science to advanced knowledge, including muscle power generating capabilities, muscle energetics, fatigue, aging and the cardio-respiratory system in exercise performance. Topics presented include the clinical importance of body responses to physical exercise, including its impact on oxygen species production, body immune

system, lipid and carbohydrate metabolism, cardiac energetics and its functional reserves, and the health-related effects of physical activity and inactivity. Novel topics like critical power, ROS and muscle, and heart muscle physiology are explored. This book is ideal for researchers and scientists interested in muscle and exercise physiology, as well as students in the biological sciences, including medicine, human movements and sport sciences. Contains basic and state-of-the-art knowledge on the most important issues of muscle and exercise physiology, including muscle and body adaptation to physical training, the impact of aging and physical activity/inactivity Provides both the basic and advanced knowledge required to understand mechanisms that limit physical capacity in both untrained people and top class athletes Covers advanced content on

Gastroenterologists require detailed knowledge regarding the anatomy of the GI system in order to understand the disturbances caused by diseases they diagnose and treat. *Gastrointestinal Anatomy and Physiology* will bring together the world's leading names to present a comprehensive overview of the anatomical and physiological features of the gastrointestinal tract. Full colour and with excellent anatomical and clinical figures throughout, it will provide succinct, authoritative and didactic anatomic and physiologic information on all the key areas, including GI motility, hepatic structure, GI hormones, gastric secretion and absorption of nutrients. GI trainees will enjoy the self-assessment MCQs, written to the level they will
