xxii + 286 pp. Includes a Foreword by Ross Kirk

Richard Florczak, has been the private chef to high profile people for more than fifteen years. He is the author of the upcoming cookbook *The Private Chef*. For the past nine years Richard has been the full-time exclusive chef for actor and director Mel Gibson and was recently sought after by Jennifer Garner to provide services on a part-time basis.

This is the first book on brain-computer interfaces (BCI) that aims to explain how these BCI interfaces can be used for artistic goals. Devices that measure changes in brain activity in various regions of our brain are available and they make it possible to investigate how brain activity is related to experiencing and creating art. Brain activity can also be monitored in order to find out about the affective state of a performer or bystander and use this knowledge to create or adapt an interactive multi-sensorial (audio, visual, tactile) piece of art. Making use of the measured affective state is just one of the possible ways to use BCI for artistic expression. We can also stimulate brain activity. It can be evoked externally by exposing our brain to external events, whether they are visual, auditory, or tactile. Knowing about the stimuli and the effect on the brain makes it possible to translate such external stimuli to decisions and commands that help to design, implement, or adapt an artistic performance, or interactive installation. Stimulating brain activity can also be done internally. Brain activity can be voluntarily manipulated and changes can be translated into computer commands to realize an artistic vision. The chapters in this book have been written by researchers in human-computer interaction, brain-computer interaction, neuroscience, psychology and social sciences, often in cooperation with artists using BCI in their work. It is the perfect book for those seeking to learn about brain-computer interfaces used for artistic applications.

This brand new text breaks the mould of books on the subject of play currently on the market. It explores, debates and further develops the theory of play, relating cutting-edge theory to examples of practice, taken from a broad range of multi-disciplinary perspectives. Each author brings their own perspective to the subject, based on rich and diverse experience, examining play-based activities from a wide variety of settings: the classroom, the playground, the home and local community. Each chapter is illustrated throughout with observation notes, case studies, interviews and discussions, encouraging you not only to critically evaluate current research but to reflect on ways in which you could develop and improve your own practice. *Perspectives on Play* will be an invaluable resource for any student studying within childhood studies, playwork programmes or training to teach at early years or primary level. The book is also ideal for early years, primary and play practitioners.

This edited volume maps dialogues between science and technology studies research on the arts and the emerging field of artistic research. The main themes in the book are an advanced understanding of discursivity and reasoning in arts-based research, the methodological relevance of material practices and things, and innovative ways of connecting, staging, and publishing research in art and academia. This book touches on topics including studies of artistic practices; reflexive practitioners at the boundaries between the arts, science, and technology; non-propositional forms of reasoning; unconventional (arts-based) research methods and enhanced modes of presentation and publication.

Taking its cue from "The Dragons of Eden, " Carl Sagan's 1977 bestselling classic, "Up from Dragons" traces the development of human intelligence back to its animal roots in an attempt to account for the vast differences between our species and all those that came before us.
