courses, this is the definitive resource for learning basic and advanced prehospital trauma skills and concepts. Now revised and expanded to cover all aspects of military prehospital trauma with 12 new chapters, this edition is tailored expressly for the military.

Trauma surgery has increasingly become a specialized field inspired by different principles and philosophy. A good trauma surgeon is a surgeon who knows how to perform abdominal vascular, thoracic, urologic, gynecologic, and orthopaedic procedures and is able to repair multiple traumatic injuries in the best sequence possible. In this first volume, practical, up-to-date guidance is provided on the optimal critical care and ICU management of trauma patients. In addition, individual chapters focus on specific injuries in orthopaedic trauma

(and especially spinal trauma) and neurotrauma, with the aim of providing a fresh view of the surgical approach and practical suggestions for improving the skills of treating surgeons. Educational issues and the organization of a trauma center are also covered. The volume will be a handy pocket guide for trainee surgeons and any surgeon, physician, or nurse who treats trauma patients. It will be particularly relevant for emergency department physicians, critical care and ICU doctors, orthopaedic surgeons, neurosurgeons, and professionals responsible for trauma care and decision making, programs of trauma education, or organization of a trauma center. Also available: Trauma Surgery Vol. 2: Thoracic and Abdominal Trauma

Includes the college's Hospital standardization report.

valuable way of presenting information within the book and purposely sought. It is hoped that exposure to individual chapters within the book will encourage readers to consider issues and problems from perspectives other than the ones with which they are familiar and perhaps comfortable. The reader is then responsible for the consideration, adoption or challenge to the content of any chapter. During the process of exploration of content, reference should always be made to its potential place within clinical practice and its influence upon the delivery of patient and family care. Although it is acknowledged that each A and E department is different and that the environment and local resources affect the translation of theory into practice, questioning and subsequent challenge of the environment, work issues

and ideas should help the reader to widen the debate about nursing in A and E and its anticipated growth into the next century. The intended outcome of such analysis by the reader may be to challenge practice. Alternatively information presented within the book may support or enhance work currently being undertaken within a number of A and E departments. With reference to the format, the book is not intended to be read from cover to cover. Instead the reader will find the book a valuable source of information that can be dipped into when required, a book where the sampling of arguments put forward by various contributors can be considered.
