The interval  $[a, +\infty)$  is the set of all real numbers  $x$  such that  $x > a$ ; and  $(-\infty, b]$  is the set of all real numbers  $x$  such that  $x < b$ . Finally,  $(-\infty, +\infty)$  denotes the set of all real numbers. For each of the intervals  $(a, b)$ ,  $[a, b]$ ,  $(a, b]$ , and  $[a, b)$  the numbers  $a$  and  $b$  are called the endpoints of the interval.

A revision and renewal of this calculus textbook, now in its seventh edition. The author has sought to utilize the technology now available for the teaching and learning of calculus. The hand-held graphics calculator is one such form of technology that has been integrated into the book. Topics in algebra, trigonometry, and analytical geometry appear in the Appendix.

A self-contained text for an introductory course, this volume places strong emphasis on physical applications. Key elements of differential equations and linear algebra are introduced early and are consistently referenced, all theorems are proved using elementary methods, and numerous worked-out examples appear throughout. The highly readable text approaches calculus from the student's viewpoint and points out potential stumbling blocks before they develop. A collection of more than 1,600 problems ranges from exercise material to exploration of new points of theory — many of the answers are found at the end of the book; some of them worked out fully so that the entire process can be followed. This well-organized, unified text is copiously illustrated, amply cross-referenced, and fully indexed.

An alternative text to Louis Leithold's *The Calculus 7* (ISBN-0-673-46913-1) concentrating on single variables within the field of calculus.
