From drive chains for transmission, attachment chain for conveying, corrosion resistant versions where customer needs are more severe through to problem solving and solution providing products such as Lambda lube free chain. Tsubaki has the products to suit any customer application.

"The clever plot takes second place to the ebullience of the writing and spot-on inventiveness of the satire."—The Times St. Martha's College, Cambridge, had been staggering along on a shoestring for decades. Then alumna Alice Toon leaves her old school a huge fortune. The dons immediately fall to fighting over the spoils. The Virgins, led by Dame Maud Theodosia Buckbarrow, believe the bequests should be spent on scholarships. The Dykes—fewer in number but better street fighters—want to raise a center of Gender and Ethnic Studies. The Old Women (mostly men) dream of fine vintages to be laid down in a decent new wine cellar. Impasse! They've reckoned without the Bursar, Jack Troutbeck. She elects to infiltrate this maelstrom of politics with her own agent, Robert Amiss, a former civil servant with a talent for sorting things out. No sooner does he arrive on the scene where the Virgins are getting the upper hand than Dame Maud is murdered, leading into what Mike Ripley of The Daily Telegraph described as: "An acidly funny romp... Superbly bitchy on the none-too-fragrant groves of academe."

The sterile insect technique (SIT) is an environment-friendly pest control method that fits into area-wide integrated pest management (AW-IPM) programmes. This book describes the principles and practice of SIT, frankly evaluating its strengths and weaknesses, successes and failures. SIT is useful against pests that have considerable impact on plant, animal and human health, and criteria are provided to guide in the selection of pests appropriate for SIT.

Vols. for 1970-71 includes manufacturers' catalogs.

Environmental Aspects of Zoonotic Diseases provides a definitive description, commentary and research needs of environmental aspects related to zoonotic diseases. There are many interrelated connections between the environment and zoonotic diseases such as: water, soil, air and agriculture. The book presents investigations of these connections, with specific reference to environmental processes such as: deforestation, floods, draughts, irrigation practices, soil transfer and their impact on bacterial, viral, fungal, and parasitological spread. Environmental aspects such as climate (tropical, sub-tropical, temperate, arid and semi-arid), developed and undeveloped countries, animal (domestic and wild) traffic animal border crossing, commercial animal trade, transportation, as well geography and weather on zoonosis, are also discussed and relevant scientific data is condensed and organized in order to give a better picture of interrelationship between the environment and current spread of zoonotic diseases. The most up-to-date source of information on this increasingly important cross-disciplinary subject, Environmental Aspects of Zoonotic Diseases will be invaluable for environmentalists, veterinarians, medical staff, environmental engineer, government agencies and consultants working in this field.

This volume contains the proceedings of the XIX International Colloquium on Mechanical Fatigue of Metals, held at the Faculty of Engineering of the University of Porto, Portugal, 5-7 September 2018. This International Colloquium facilitated and encouraged the exchange of knowledge and experiences among the different communities involved in both basic and applied research in the field of the fatigue of metals, looking at the problem of fatigue exploring analytical and numerical simulative approaches. Fatigue damage represents one of the most important types of damage to which structural materials are subjected in normal industrial services that can finally result in a sudden and unexpected abrupt fracture. Since metal alloys are still today the most used materials in designing the majority of components and structures able to carry the highest service loads, the study of the different aspects of metals fatigue attracts permanent attention of scientists, engineers and designers.

Despite the longevity of animation and its significance within the history of cinema, film theorists have focused on live-action motion pictures and largely ignored hand-drawn and computer-generated movies. Thomas Lamarre contends that the history, techniques, and complex visual language of animation, particularly Japanese animation, demands serious and sustained engagement, and in *The Anime Machine* he lays the foundation for a new critical theory for reading Japanese animation, showing how anime fundamentally differs from other visual media. *The Anime Machine* defines the visual characteristics of anime and the meanings generated by those specifically “animetic” effects—the multiplanar image, the distributive field of vision, exploded projection, modulation, and other techniques of character animation—through close analysis of major films and television series, studios, animators, and directors, as well as Japanese theories of animation. Lamarre first addresses the technology of anime: the cells on which the images are drawn, the animation stand at which the animator works, the layers of drawings in a frame, the techniques of drawing and blurring lines, how characters are made to move. He then examines foundational works of anime, including the films and television series of Miyazaki Hayao and Anno Hideaki, the multimedia art of Murakami Takashi, and CLAMP’s manga and anime adaptations, to illuminate the profound connections between animators, characters, spectators, and technology. Working at the intersection of the philosophy of technology and the history of thought, Lamarre explores how anime and its related media entail material orientations and demonstrates concretely how the “animetic machine” encourages a specific approach to thinking about technology and opens new ways for understanding our place in the technologized world around us.

At publication date, a free ebook version of this title will be available through Luminos, University of California Press's Open Access publishing program. Visit www.luminosoa.org to learn more. The Hasegawa Reader is an open access companion to the bilingual catalogue copublished with The Noguchi Museum to accompany an international touring exhibition, *Changing and Unchanging Things*: Noguchi and Hasegawa in Postwar Japan. The exhibition features the work of two artists who were friends and contemporaries: Isamu Noguchi and Saburo Hasegawa. This volume is intended to give scholars and general readers access to a wealth of archival material and writings by and about Saburo Hasegawa. While Noguchi’s reputation as a preeminent American sculptor of the twentieth century only grows stronger, Saburo Hasegawa is less well known, despite being considered the most literate artist in Japan during his lifetime (1906–1957). Hasegawa is credited with introducing abstraction in Japan in the mid 1930s, and he worked as an artist in diverse media including oil and ink painting, photography, and printmaking. He was also a theorist and widely published essayist, curator, teacher, and multilingual conversationalist. This valuable trove of Hasegawa material includes the entire manuscript for a 1957 Hasegawa memorial volume, with its beautiful essays by philosopher Alan Watts, Oakland Museum Director Paul Mills, and *Japan Times* art writer Elise Grilli, as well as various unpublished writings by Hasegawa. The ebook edition will also include a dozen essays by Hasegawa from the postwar period, and one prewar essay, professionally translated for this publication to give a sense of Hasegawa’s voice. This resource will be an invaluable tool for scholars and students interested in midcentury East Asian and American art and tracing the emergence of contemporary issues of hybridity, transnationalism, and notions of a “global Asia.”

This text gives students a framework for their comparative study of religion that includes full, in-depth descriptions of each "way of being religious."
