The elements in the modern periodic table are arranged according to increasing atomic number (8), as a result of the work of Dmitri Mendeleev (9). This arrangement is based on the number of protons (10) in the nucleus of an atom of the element. The modern form of the periodic table results in the periodic law (11) which states that when elements are arranged

For each chapter in the Glencoe textbook, Chemistry: Matter and Change, two pages of chapter review questions have been provided. These questions are designed to test your comprehension of chapter content and provide you with practice in the related skills specified in the NSCS. All of the questions are in a multiple-choice format.
