Another key feature of cohesion is the use of pronouns and other reference devices—in the third sentence of this passage, this refers to the possibility that children are responsible for changes in languages. The study of text cohesion and coherence has been a topic of heated discussion in linguistics since the 1990s. Western linguists have developed two major theoretical frameworks to describe the relationship between the two concepts: one posits that cohesive devices are important means to ensure cohesion; the other argues that coherence does not rely on cohesion. Yet neither has complete explanatory power over reality; nor can they solve real-life problems. This title proposes a creative, concrete, and highly operational theoretical model that unites cohesion and coherence using authentic English or Chinese examples. The authors clarify the concepts of coherence and expand the scope of the research by focusing on a variety of internal and external factors, such as psycho-cognitive and socio-cultural factors. Moreover, the authors propose that the new theoretical paradigm can be applied to a range of other disciplines, including translation and foreign language teaching. This title has been one of the most cited works on cohesion and coherence in China. Students and scholars of discourse analysis, linguistics, and language education will find this an invaluable reference.

Relating Events in Narrative, Volume 2: Typological and Contextual Perspectives edited by Sven Strömqvist and Ludo Verhoeven, is the much anticipated follow-up volume to Ruth Berman and Dan Slobin's successful "frog-story studies" book, Relating Events in Narrative: A Crosslinguistic Developmental Study (1994). Working closely with Ruth Berman and Dan Slobin, the new editors have brought together a wide range of scholars who, inspired by the 1994 book, have all used Mercer Mayer's Frog, Where Are You? as a basis for their research. The new book, which is divided into two parts, features a broad linguistic and cultural diversity. Contributions focusing on crosslinguistic perspectives make up the first part of the book. This part is concluded by Dan Slobin with an analysis and overview discussion of factors of linguistic typology in frog-story research. The second part offers a variety of theoretical and methodological perspectives, all dealing with contextual variation of narrative construction in a wide sense: variation across medium/modality (speech, writing, signing), genre variation (the specific frog story narrative compared to other genres), frog story narrations from the perspective of theory of mind, and from the perspective of bilingualism and second language acquisition. Several of the contributions to the new book manuscript also deal with developmental perspectives, but, in distinction to the 1994 book, that is not the only focused issue. The second part is initiated by Ruth Berman with an analysis of the role of context in developing narrative abilities. The new book represents a rich overview and illustration of recent advances in theoretical and methodological approaches to the crosslinguistic study of narrative discourse. A red thread throughout the book is that crosslinguistic variation is not merely a matter of variation in form, but also in content and aspects of cognition. A recurrent perspective on language and thought is that of Dan Slobin's theory of "thinking for speaking," an approach to cognitive consequences of linguistic diversity. The book ends with an epilogue by Herbert Clark, "Variations on a Ranarian Theme."

The contributions to this volume investigate relations of cohesion and coherence as well as instantiations of discourse phenomena and their interaction with information structure in multilingual contexts. Some contributions concentrate on procedures to analyze cohesion and coherence from a corpus-linguistic perspective. Others have a particular focus on textual cohesion in parallel corpora that include both originals and translated texts. Additionally, the papers in the volume discuss the nature of cohesion and coherence with implications for human and machine translation. The contributors are experts on discourse phenomena and textuality who address these issues from an empirical perspective. The chapters in this volume are grounded in the latest research making this book useful to both experts of discourse studies and computational linguistics, as well as advanced students with an interest in these disciplines. We hope that this volume will serve as a catalyst to other researchers and will facilitate further advances in the development of cost-effective annotation procedures, the application of statistical techniques for the analysis of linguistic phenomena and the elaboration of new methods for data interpretation in multilingual corpus linguistics and machine translation.

Facebook, in just a few years, has become one of the central tools people use to communicate with each other in everyday life. However, the perceived freedom of action on the site and the actual processes that are permitted in Facebook's set up don't always match up: in this book this gap is examined. This book identifies the interrelations between user text actions and the software environment framing them. It takes a critical perspective on Facebook and develops a model that grants methodological access to complex interlaced practices incorporating media, text and literacies. It shows Facebook users employing idiosyncratic and Facebook-specific literacy practices, and gives weight to the larger hypothesis of the software service as an ideological setting designed to calculate and standardize human behaviour. Specifically, the book examines text action and automation within Facebook to determine how the software service intervenes in the communicative flow between/among profile owners and profile recipients. This is cutting edge work and of huge importance to modern fields of discourse analysis and computer-mediated communication.

The Routledge Handbook of Systemic Functional Linguistics brings together internationally renowned scholars of systemic functional linguistics (SFL) to provide a space for critical examination of the key tenets underpinning SFL theory. Uniquely, it includes description of the three main strands within contemporary

SFL scholarship: Halliday's Introduction to Functional Grammar, Martin's discourse semantics and Fawcett's Cardiff Grammar. In five sections and thirty-eight interdisciplinary chapters, this is the first handbook to cover the whole architecture of SFL theory, comprising: ? the ontology and epistemology of SFL; SFL as a clause grammar; lexicogrammar below the clause, and SFL's approach to constituency; SFL's vibrant theory of language above the clause; and SFL as a theory of praxis with real-world applications. With a wide range of language examples, a comprehensive editors' introduction and a section on further reading, The Routledge Handbook of Systemic Functional Linguistics is an essential resource for all those studying and researching SFL or functional grammar.

Bilingualism Through Schooling is a comprehensive survey of bilingual education. It shows how bilingual schooling can have a double impact by providing students with functional second-language competence, and also contributing to their deeper understanding of culture and history. Concerned with both ethnolinguistic minority children and majority, English-speaking pupils, the book approaches bilingualism from a variety of perspectives--linguistic, psychological, and socio-cultural. Among the many topics discussed are: goals and consequences of bilingualism, sociolinguistic contexts, language attitudes, and proficiency assessment. Ramirez explores the various types of programs and techniques used to facilitate second-language acquisition and also provides guidelines for the preparation and certification of bilingual instructors. Bibliographies are included.

The field of translation studies has grown rapidly over recent decades, with critical questions being investigated across the globe. Drawing together this scattered research, Systemic Functional Linguistics and Translation Studies consolidates important propositions by drawing on systemic functional linguistics (SFL). Using the SFL dimensions of stratification, rank, axis and delicacy to show how languages are more similar or more different, this book provides a state-of-the-art critical assessment of the interaction between SFL and translation studies. Highlighting the major contribution SFL can make in developing translation theories, a team of world-leading experts investigate how intricate and wide-ranging translation questions, such as re-instantiation and multimodality, can be most efficiently explored through a detailed meaning- and function-oriented linguistic theory. Examining the theoretical concepts and practical applications of SFL in the translation of a range of languages, including Arabic, Chinese and Brazilian Portuguese, Systemic Functional Linguistics and Translation Studies provides a stimulus for new work spanning the two fields and suggests new directions for future research.

This book attempts to define English as a Foreign Language (EFL) and globalization based on the literature and highlighting its major facets. Discussing the spread of English and motives for this kind of spread, the book outlines some of the impacts the language has had on different societies, cultures and the kind of reactions this language has generated among different cultures. The spread of the English language can't be fully understood without the hegemonic nature of English. Yet, this book claims that, despite the hegemonic nature of English, it is still badly needed in the Arab world for the purpose of communicating with the world, education, acquiring technology and development at large. To teach English as such, it is necessary to change the traditional methods of instruction. It is important to solidify teaching of the native language, empower the learners to have more self-confidence through learning English, teach the language as a foreign, rather than second language, and make changes in the curriculum in response to the needs of the learners and society.

This survey aims to provide a comprehensive introduction to current research in all branches of the field of linguistics, from syntactic theory to ethnography of speaking, from signed language to the mental lexicon. This volume concentrates on sociolinguistics and allied fields.
