How do diseases and disorders affect the design of massage treatment plans? What precautions are needed? When is massage contraindicated? Develop the knowledge you need to evaluate a client based on how diseases and disorders affect the systems of the body and the critical-thinking skills to apply that knowledge in practice. "A 'functional approach' to pathophysiology fosters understanding of the inter-relationship between body systems and human function. Clients are concerned about how a disorder affects their quality of life and ability to function. My goal for this book is to guide readers to use clinical reasoning to create client-specific, outcome-based massage treatment plans from this vital information--signs, symptoms, diagnosis, and client functional concerns."--Virginia S. Cowen, PhD, LMT, RYT, CSCS The Plus Code inside new, printed texts gives you access to a wealth of instructor and student resources online at DavisPlus, including your Davis Digital Version, animations, flash cards, case studies, quizzes, and podcasts recorded by the author.

The case studies in this book use authentic injury assessment examples to help readers link theory and clinical practice with the goal of becoming competent clinicians. The situations are realistic and present more than 130 of the injuries that athletic trainers may encounter in the real world. The questions that accompany the cases ask readers to identify clinical and differential diagnoses, critique the evaluating clinician's actions, recommend treatment, comment on ethical choices, and make many of the decisions they will face in the field. The cases encourage readers to think and problem solve; evidence-based answers (for select cases in the text and for all cases in the instructor's manual) ensure that the recommended clinical decisions are based on the best available research, clinical expertise, and patient preferences rather than on anecdotal practice.
