Mexican Literature in Theory is the first book in any language to engage post-independence Mexican literature from the perspective of current debates in literary and cultural theory. It brings together scholars whose work is defined both by their innovations in the study of Mexican literature and by the theoretical sophistication of their scholarship. Mexican Literature in Theory provides the reader with two contributions. First, it is one of the most complete accounts of Mexican literature available, covering both canonical texts as well as the most important works in contemporary production. Second, each one of the essays is in itself an important contribution to the elucidation of specific texts. Scholars and students in fields such as Latin American studies, comparative literature and literary theory will find in this book compelling readings of literature from a theoretical perspective, methodological suggestions as to how to use current theory in the study of literature, and important debates and revisions of major theoretical works through the lens of Mexican literary works.

This book is a reprint of the APA manual originally published in 1957. It includes examples, new guidelines and advice, and more.

"Do you want to write clearer, livelier prose? This witty primer will help." —The New York Times Book Review An exploration of how the most ordinary words can be turned into verbal constellations of extraordinary grace through the art of building sentences The sentence is the common ground where every writer walks. A good sentence can be written (and read) by anyone if we simply give it the gift of our time, and it is as close as most of us will get to making something truly beautiful. Using minimal technical terms and sources ranging from the Bible and Shakespeare to George Orwell and Maggie Nelson, as well as scientific studies of what can best fire the reader's mind, author Joe Moran shows how we can all write in a way that is clear, compelling and alive. Whether dealing with finding the ideal word, building a sentence, or constructing a paragraph, First You Write a Sentence informs by light example: much richer than a style guide, it can be read not only for instruction but for pleasure and delight. And along the way, it shows how good writing can help us notice the world, make ourselves known to others, and live more meaningful lives. It's an elegant gem in praise of the English sentence.

A basic problem in computer vision is to understand the structure of a real world scene given several images of it. Techniques for solving this problem are taken from projective geometry and photogrammetry. Here, the authors cover the geometric principles and their algebraic representation in terms of camera projection matrices, the fundamental matrix and the trifocal tensor. The theory and methods of computation of these entities are discussed with real examples, as is their use in the reconstruction of scenes from multiple images. The new edition features an extended introduction covering the key ideas in the book (which itself has been updated with additional examples and appendices) and significant new results which have appeared since the first edition. Comprehensive background material is provided, so readers familiar with linear algebra and basic numerical methods can understand the projective geometry and estimation algorithms presented, and implement the algorithms directly from the book.
