Scholars, biomedical scientists, and Western bioethicists at the research Center for Islamic Legislation & Ethics, Qatar Faculty of Islamic Studies. By examining principle-based bioethics, the contributors to this volume addressed a number of key issues related to the future of the field. Discussion is based around the role of religion in bioethical reasoning, specifically from an Islamic perspective. Also considered is a presentation of the concept of universal principles for bioethics, with a response looking at the possibility (or not) of involving religion. Finally, there is in-depth analysis of how far specific disciplines within the Islamic tradition — such as the higher objectives of

This book discusses the common principles of morality and ethics derived from divinely endowed intuitive reason through the creation of al-fitr' a (nature) and human intellect (al-'aql).

Biomedical topics are presented and ethical issues related to topics such as genetic testing, assisted reproduction and organ transplantation are discussed. Whereas these natural sources are God's special gifts to human beings, God's revelation as given to the prophets is the supernatural source of divine guidance through which human

Communities have been guided at all times through history. The second part of the book concentrates on the objectives of Islamic religious practice – the maqa' sid – which include: Preservation of Faith, Preservation of Life, Preservation of Mind (intellect and reason), Preservation of Progeny (al-nasl) and Preservation of Property. Lastly, the third part of the book discusses selected topical issues, including abortion, assisted reproduction devices, genetics, organ transplantation, brain death and end-of-life aspects. For each topic, the current medical evidence is followed by a detailed discussion of the ethical issues involved.

Islamic Bioethics presents a wide variety of perspectives and debates on how Islamic societies deal with the ethical dilemmas raised by biomedicine and new technologies. The book is a "constructive dialogue" between contributors selected from a multidisciplinary group of Muslim and non-Muslim scholars from different Islamic countries. The 11 chapters illuminate the diversity and complexity of the issues discussed in Islamic bioethics and pave the way to a better understanding of Islamic bioethics and dialogue in the global bioethics community. The chapters take both theoretical and practical approaches to the topic, and each covers an emerging issue in Islamic

Muslim Medical Ethics draws on the work of historians, health-care professionals, theologians, and social scientists to produce an interdisciplinary view of medical ethics in Muslim societies and of the impact of caring for Muslim patients in non-Muslim societies. Edited by Jonathan E. Brockopp and Thomas Eich, the volume challenges traditional presumptions of theory and practice to demonstrate the ways in which Muslims balance respect for their heritage with the health

Issues of a modern world. Like members of many other faiths, Muslims are deeply engaged by the technological challenges posed by modern biomedicine, and they respond to those challenges with enormous creativity—whether as patients, doctors, or religious scholars.

Muslim Medical Ethics demonstrates that religiously based cultural norms often inform medical practice, and vice versa, in an ongoing discourse. The contributors map the breadth and boundaries of this discourse through discussions of contested issues on the cutting edge of ethical debates, from fertilized embryos in Saudi Arabia to patient autonomy in Toronto, from organ trafficking in Egypt to

With growing populations of Muslims in North America and Europe, Western physicians and health-care workers should be educated on the special needs of this category of patients. In every essay the richness of the Islamic tradition is visible. In the premodern period Muslim physicians were considered among the best in the world, building and improving on Greek and Indian traditions. Muslim physicians today continue that tradition while incorporating scientific advances. Scholars of Islamic law work closely with physicians to develop ethical

This book is a contribution to the nascent discourse on global health and biomedical research ethics involving Muslim populations and Islamic contexts. It presents a rich sociological account about the ways in which debates and questions involving Islam within the biomedical research context are negotiated - a perspective which is currently lacking within the broader bioethics literature. The book tackles some key understudied areas including: role of faith in moral deliberations within biomedical research ethics, the moral anxiety and frustration

What role should religion play in a religiously pluralistic liberal society? Public bioethics unavoidably raises this question in a particularly insistent fashion. As the 20 papers in this collection demonstrate, the issues are complex and multifaceted. The authors address specific and highly contested issues as assisted suicide, stem cell research, cloning, reproductive
