<b>The ten countries in the ASEAN region account for approximately 5% of world gross domestic product and 8% of world population and represent the most diverse group of nations in terms of the level of prosperity, political system, culture, language, and history. This diversity in ASEAN not only helps us understand the notion of national competitiveness, but also provides important policy lessons for both developed and developing countries. This book - a collection of essays - provides insights on competitiveness challenges and policies. It provides an excellent overview of competitiveness for a group of countries at various stages of development. Written in a simple and accessible manner, this book will be of interest to students, researchers, business executives and government officials.</b>

International Industrial Networks and Industrial Restructuring in Central and Eastern Europe analyses the role of international industrial networks in industrial restructuring and corporate growth in central Europe, Russia and Ukraine. It shows that two distinct patterns of international industrial integration - domestic vs. foreign led modernisations - have developed in these two regions which have significant effects on patterns of growth and integration of these economies. International Industrial Networks and Industrial Restructuring in Central and Eastern Europe is based on a number of industry and firm case studies which are analysed and interpreted within the current international business and political economy literature. The publication provides valuable insights to managers and policy-makers who are interested in understanding different strategic options for business activity in Central and East European countries. For the academic reader, it offers a new perspective on international, industrial networks in which theories on strategic management and on industry restructuring and corporate growth are merged into a new view of growth and transformation process.

This book offers a critical analysis of recent developments in the automotive industry of East-Central Europe (ECE). Economists, industry specialists and national governments have considered the rapid development of the automotive industry in ECE in the past twenty years an unqualified success. This rapid growth has been based on large inflows of foreign direct investment (FDI) from Western Europe, North America, Japan and South Korea, and it significantly contributed to GDP growth, created thousands of new jobs, and completely transformed the previously existing automotive industry in the region. This volume offers an analysis that goes beyond uncritical celebratory accounts of this rapid growth. It is based on original, detailed firm-level research conducted by the author in Czechia and Slovakia between 2009 and 2015 that covered assembly firms and the networks of component suppliers. Theoretically and conceptually, the analysis will draw on the global production networks and global value chains perspectives. Drawing on the original empirical data and on additional available information, this volume concentrates on several important questions related to the development of the automotive industry in ECE in the 2000s:• The role of FDI in the rapid development of the automotive industry after 1990 and particularly in the 2000s• The upgrading of the automotive industry in East-Central Europe through FDI• The position of ECE in the automotive industry research and development (R&D)• The effects of the 2008-2009 economic crisis in the automotive industry of ECE.• The role of state in the rapid development of the automotive industry in ECE in the 1990s and 2000s.• The effects of FDI on domestic firms in the form of linkages between foreign-owned and domestic firms and spillovers from foreign-owned to domestic firms.

The automobile industry is evolving rapidly on a worldwide basis. Manufacturers are merging, component design and manufacture are now frequently outsourced instead of being created in-house, brands are changing and the giant auto makers are expanding deeper into providing financial services to car buyers. The skyrocketing price of gas spurs developments in hybrid technology and clean diesel, as manufacturers look for ways to improve fuel efficiency. Meanwhile, all of the biggest, most successful firms have become totally global in nature. Plunkett's Automobile Industry Almanac will be your complete guide to this immense, fascinating industry. On the car dealership side, giant, nationwide holding companies have acquired the best dealers in major markets. Even the used car business is being taken over by national chains. E-commerce is having profound effects on the car industry. Consumers use the Internet to become better informed before making a purchase. Online sites like Autobytel steer millions of car buyers toward specific dealers while the same sites deliver competing bids for cars, insurance and financing in a manner that lowers costs and improves satisfaction among consumers. Meanwhile, auto makers are using the latest in e-commerce methods to manage their supply chains and replenish their inventories. This exciting new book (which includes a database on CD-ROM) is a complete reference tool for everything you need to know about the car, truck and specialty vehicles business, including: Automotive industry trends and market research; Mergers, acquisitions, globalization; Automobile manufacturers; Truck makers; Makers of specialty vehicles such as RVs; Automobile loans, insurance and other financial services; Dealerships; Components manufacturers; Retail auto parts stores; E-commerce ; and much, much more. You'll find a complete overview, industry analysis and market research report in one superb, value-priced package. This book also includes statistical tables, an automobile industry glossary, industry contacts and thorough indexes. The corporate profile section of the book includes our proprietary, in-depth profiles of the 400 leading companies in all facets of the automobile industry. Purchasers may also receive a free copy of the company profiles database on CD-ROM.

This reference book is a complete guide to the trends and leading companies in the engineering, research, design, innovation and development business fields: those firms that are dominant in engineering-based design and development, as well leaders in technology-based research and development. We have included companies that are making significant investments in research and development via as many disciplines as possible, whether that research is being funded by internal investment, by fees received from clients or by fees collected from government agencies. In this carefully-researched volume, you'll get all of the data you need on the American Engineering & Research Industry, including: engineering market analysis, complete industry basics, trends, research trends, patents, intellectual property, funding, research and development data, growth companies, investments, emerging technologies, CAD, CAE, CAM, and more. The book also contains major statistical tables covering everything from total U.S. R&D expenditures to the total number of scientists working in various disciplines, to amount of U.S. government grants for research. In addition, you'll get expertly written profiles of nearly 400 top Engineering and Research firms - the largest, most successful corporations in all facets of Engineering and Research, all cross-indexed by location, size and type of business. These corporate profiles include contact names, addresses, Internet addresses, fax numbers, toll-free numbers, plus growth and hiring plans, finances, research, marketing, technology, acquisitions and much more. This book will put the entire Engineering and Research industry in your hands. Purchasers of either the book or PDF version can receive a free copy of the company profiles database on CD-ROM, enabling key word search and export of key information, addresses, phone numbers and executive names with titles for every company profiled.
