After this introductory survey of the componential analysis of the speech act as a model for describing strategies in verbal interaction I wish to turn to the central theme of this paper, i.e., verbal irony, which, from a pragmalinistic point of view, represents a particular kind of strategy, since it needs to be described both at the propositional and the illocutionary level of the speech My starting-point for the present study is a typological comparison between three different kinds of irony.

The Speech Act Theory The speech act theory is a theory of language put forward by Austin (2009) and his student Searle (2000). Contrary to linguistics and semantics restricting their work to the linguistic structures created, the speech act theory takes into account the non-linguistic communication situations, as well.

Speech acts are an important and integral part of day-to-day life in all languages. In language acquisition, the need to teach speech acts in a target language has been demonstrated in studies conducted in the field of interlanguage pragmatics which indicate that the performance of speech acts may differ considerably from culture to culture, thus creating communication difficulties in cross-cultural encounters. Considering these concerns, the aim of this volume is two-fold: to deal with those theoretical approaches that inform the process of learning speech acts in particular contextual and cultural settings; and, secondly, to present a variety of methodological proposals, grounded on research-based ideas, for the teaching of the major speech acts in second/foreign language classrooms. This volume is a valuable theoretical and practical resource not only for researchers, teachers and students interested in speech act learning/teaching but also for textbook writers wishing to have an informed opinion on the pedagogical implications derived from

research on speech act performance.

The first handbook to survey and expand the burgeoning field of corpus pragmatics, the intersection of pragmatics and corpus linguistics.

Did earlier speakers of English use the same speech acts that we use today? Did they use them in the same way? How did they signal speech act values and how did they negotiate them in case of uncertainty? These are some of the questions that are addressed in this volume in innovative case studies that cover a wide range of speech acts from Old English to Present-day English. All the studies offer careful discussions of methodological and theoretical issues as well as detailed descriptions of specific speech acts. The first part of the volume is devoted to directives and commissives, i.e. speech acts such as requests, commands and promises. The second part is devoted to expressives and assertives and deals with speech acts such as greetings, compliments and apologies. The third part, finally, contains technical reports that deal primarily with the problem of extracting speech acts from historical corpora.

A direct successor to Searle's *Speech Acts* (C.U.P. 1969), *Expression and Meaning* refines earlier analyses and extends speech-act theory to new areas including indirect and figurative discourse, metaphor and fiction.

This is an introduction to pragmatics, the study of how people make sense of each other linguistically. The author explains, and illustrates, basic concepts such as the co-operative principle, deixis, and speech acts, providing a clear, concise foundation for further study.

The first truly multidisciplinary text of its kind, this book offers an original analysis of the current state of linguistic pragmatics. Cummings argues that no study of pragmatics can reasonably neglect the historical and contemporary influences on this discipline of neighboring fields of inquiry, particularly philosophy, psychology, artificial intelligence, and language pathology. By the same token, these fields can begin to address their own questions more productively by examining the insights of pragmatics. The book's range of topics and depth of analysis will be of interest to advanced undergraduate and more specialized readers in linguistics, communication studies, speech and language therapy, and cognitive science. Topics discussed include: *coverage of pragmatic concepts and theories; *criticisms of Sperber and Wilson's relevance theory, Habermas's theory of communicative competence, and Kasher's views on the modularity of pragmatics; *pragmatic deficits in a range of child and adult language disorders; and *a pragmatic analysis of argumentation in topical issues such as AIDS and BSE theories of meaning, inferences, pragmatics and AI.

Gila Schauer's study of interlanguage pragmatic development in English is situated in the context of studying abroad. It is the first

book-length study of a common occurrence worldwide, but one that has not received the focus it deserves. Schauer examines the interlanguage pragmatic development of German learners of English at a British University over the course of a year. The focus is not only on the learners' productive pragmatic development, but also on their pragmatic awareness, which is compared with their grammatical awareness. The analysis undertaken is both qualitative and quantitative, and the book draws some important conclusions relevant to the whole field of interlanguage pragmatics. It will be engaging reading for researchers and postgraduate studies in applied linguistics, especially those working on interlanguage and cross-cultural pragmatics, multilingualism and second language acquisition.

The nature and function of language as Man's chief vehicle of communication occupies a focal position in the human sciences, particularly in philosophy. The concept of 'communication' is problematic because it suggests both 'meaning' (the nature of language) and the activity of speaking (the function of language). The philosophic theory of 'speech acts' is one attempt to clarify the ambiguities of 'speech' as both the use of language to describe states of affair and the process in which that description is generated as 'communication'. The present study, *Speech Act Phenomenology*, is in part an examination of speech act theory. The theory offers an explanation for speech performance, that is, the structure of speech acts as 'relationships' and the content of speech acts as 'meaning'. The primary statement of the speech act theory that is examined is that presented by Austin. A secondary concern is the formulation of the theory as presented by Searle and Grice. The limitations of the speech act theory are specified by applying the theory as an explanation of 'human communication'. This conceptual examination of 'communication' suggests that the philosophic method of 'analysis' does not resolve the antinomy of language 'nature' and 'function'. Basically, the conceptual distinctions of the

speech act theory (i. e. locutions, illocutions, and perlocutions) are found to be empty as a comprehensive explanation of the concept 'communication'.
