Stanley A. Rice  
discusses the evolution  
of the network of life  
and the crucial role  
played by humans in  
determining the future  
of our world. Unlike

animals. Much later  
symbiotic relationships  
led to flowering plants  
that depended on  
animals for pollination  
and seed dispersal. With  
the advent of sexual  
selection, there  
developed an  
astonishing world of  
complex behavior and a  
dizzying array of life  
forms. In humans,  
sexual selection exerted

a great influence on the development of our large brains. Altruism-when species learned to work together-resulted in even greater variety and complexity. In early humans, altruism gave rise to ever-widening social circles and the spread of culture. Rice also discusses the role of photosynthesis in establishing and
