Mapping Boston is an exemplar of such creative attentiveness—bringing the history of one of America's oldest and most beautiful cities alive through the maps that have depicted it over the centuries. The book includes both historical maps of the city and maps showing the gradual emergence of the New England region from the imaginations of explorers to a form that we would recognize today.

The story of an infamous crime, a revered map dealer with an unsavory secret, and the ruthless subculture that consumed him Maps have long exerted a special fascination on viewers—both as beautiful works of art and as practical tools to navigate the world. But to those who collect them, the map trade can be a cutthroat business, inhabited by quirky and sometimes disreputable characters in search of a finite number of extremely rare objects. Once considered a respectable antiquarian map dealer, E. Forbes Smiley spent years doubling as a map thief—until he was finally arrested slipping maps out of books in the Yale University library. The Map Thief delves into the untold history of this fascinating high-stakes criminal and the inside story of the industry that consumed him. Acclaimed reporter Michael Blanding has interviewed all the key players in this stranger-than-fiction story, and shares the fascinating histories of maps that charted the New World, and how they went from being practical instruments to quirky heirlooms to highly coveted objects. Though pieces of the map theft story have been written before, Blanding is the first reporter to explore the story in full—and had the rare privilege of having access to Smiley himself after he'd gone silent in the wake of his crimes. Moreover, although Smiley swears he has admitted to all of the maps he stole, libraries claim he stole hundreds more—and offer intriguing clues to prove it. Now, through a series of exclusive interviews with Smiley and other key individuals, Blanding teases out an astonishing tale of destruction and redemption. The Map Thief interweaves Smiley's escapades with the stories of the explorers and mapmakers he knew better than anyone. Tracking a series of thefts as brazen as the art heists in Provenance and a subculture as obsessive as the oenophiles in The Billionaire's Vinegar, Blanding has pieced together an unforgettable story of high-stakes crime.

Carving Nature at its Joints? In order to map the future of biology we need to understand where we are and how we got there. Present day biology is the realization of the famous metaphor of the organism as a *bête à machine* elaborated by Descartes in Part V of the *Discours*, a realization far beyond what anyone in the seventeenth century could have imagined. Until the middle of the nineteenth century that machine was an articulated collection of macroscopic parts, a system of gears and levers moving gasses, solids, and liquids, and causing some parts of the machine to move in response to the force produced by others. Then, in the nineteenth century, two divergent changes occurred in the level at which the living machine came to be investigated. First, with the rise of chemistry and the particulate view of the composition of matter, the forces on macroscopic machine came to be understood as the manifestation of molecular events, and functional biology became a study of molecular interactions. That is, the machine ceased to be a clock or a water pump and became an articulated network of chemical reactions. Until the first third of the twentieth century this chemical view of life, as reflected in the development of classical biochemistry treated the chemistry of biological molecules in much the same way as for any organic chemical reaction, with reaction rates and side products that were the consequence of statistical properties of the concentrations of reactants.

Mapping Human and Natural Systems covers our increasingly digital world - internet communications, cloud computing, etc., and how our ability to quickly and visually communicate is becoming increasingly important. The book provides the reader with a ready reference to learn about map creation and interpretation and to help them better interact with, and construct, maps. There are several software systems available that focus on maps and mapping, but no single resource that covers the fundamentals of mapping. This book fills that need. Presents unique reflections, diversions, inspections and translations to encourage critical thinking skills Includes a companion site to enhance the reflections, diversions, inspections and translations with additional resources Provides examples and discussions from seasoned natural resource professionals with over 80 years of combined professional experience
