taxa. MCEs are characterized by light-dependent corals and associated communities typically found at depths ranging from 30-40 m. and extending to over 150 m. in tropical and subtropical ecosystems. They are populated with organisms typically associated with shallow coral reefs,

The number of ships that have met their ends off Nova Scotia's rugged coast is almost limitless. Their stories and histories are at once both interesting and tragic, and in some cases, mysterious. Collected here are the accounts of just a few of these events, footnotes in the long maritime
