Mining law is the branch of law relating to the legal requirements affecting minerals and mining.

## **Mining law - Wikipedia**

Mining projects at an industrial scale in Angola typically involve an international investor or operator (such as South African, Russian, Australian and American majors) and one or more local partners. In fact, the Angolan government is very keen to encourage the participation of Angolan companies in mining projects, where these lack the technical

"Mining Law and Policy: International Perspectives explains the key legal issues in the regulation of mining. The book starts with an overview of the mineral sector and broader forces which influence (and are impacted by) mineral regulation including mineral economics, sustainable development and other policy considerations." -- provided by publisher.

This book covers a broad spectrum of issues shaping the current paradigm of minerals sector governance. The ultimate aim of the book is to understand trends and developments in mineral law and policy occurring at international, regional, cross-border and in some selected cases at national level and also to identify some of the challenges lying ahead. With these objectives in view, the book brings together a representative selection of the most knowledgeable authors on the subject. The contributions deal with a diverse range of issues tackled from interdisciplinary perspectives. Topics are divided into five main chapters: international and comparative aspects of mineral law; actors and policies in the minerals industry; investment prospects, financial and fiscal issues; sustainable development and regional outlooks. The book aspires to serve as a useful reference for scholars, practitioners, students and all those with an interest in current developments in the areas reviewed. Elizabeth Bastida is the Rio Tinto Research Fellow and the Director of the Mineral Law and Policy Programme at the

Centre for Energy, Petroleum, Mineral Law and Policy at the University of Dundee (CEPMLP/Dundee). Thomas W?ide is the Professor of International Economic, Natural Resources and Energy Law and was (until 2001) the Executive Director of CEPMLP/Dundee. He currently runs TWA, his private consultancy firm, which provides advisory services in natural resources and energy law, regulatory reform, investment promotion, state enterprise/agency appraisal and restructuring, privatisation, contract assessment, negotiation and dispute management. Janeth Warden-Fern?andez is a Research and Teaching Fellow, an advisor of the Mineral Law and Policy Programme and the Manager of the Distance Learning Programme at CEPMLP/Dundee.

This book explores a disciplinary matrix for the study of the law and governance concerning mining and minerals from a global perspective. The book considers the key challenges of achieving the goals of Agenda 2030 and the transition to low-carbon circular economies. The perspective encompasses the multi-faceted and highly complex interaction of multiple fields of international law and policy, soft law and standards, domestic laws and regulations as well as local levels of ordering of social relations. What emerges is a largely neglected, unsystematised and under-theorised field of study which lies at the intersection of the global economy, environmental sustainability, human rights and social equity. But it also underlies the many loopholes to address at all levels, most notably at the local level – land and land holders, artisanal miners, ecosystems, local economies, local linkages and development. The book calls for a truly cosmopolitan academic discipline to be built and identifies challenges to do so. It also sets a research agenda for further studies in this fast-changing field.

For centuries, denuded landscapes, fouled streams, and dirty air were accepted by society as part of the price that had to be paid for mineral production. Even initial environmental legislation devised by industrialized countries in the 1960s and 1970s was largely designed without mining in mind. And developing countries had little in the way of environmental policy. With the advent of sustainability in the 1990s, times have changed. Today's economic development, many now feel, must not come at the expense of an environmentally degraded future. Current policies toward mining are under rigorous review, and mineral-rich developing countries are designing environmental policies where none existed before. In *Mining and the Environment*, noted analysts offer viewpoints from Australia, Chile, the United Kingdom, the United States, and the European community on issues and challenges of metal mining.

The first and only English-language reference to the laws and regulations of the booming Indonesian mining sector As the growing Indonesian mining industry attracts new investment from foreign mining companies, those companies are faced with the daunting challenge of unraveling the hugely confusing and complex plethora of local laws and regulations that govern the industry. Until now, there has been no comprehensive English-language guide to

Indonesia's mining laws that western companies could turn to for reliable guidance and advice. This detailed reference fills that gap for the mining companies, advisors, and consultants who must navigate this confusing and growing web of regulation on a daily basis. The only English-language reference on the subject of Indonesian mining law A valuable guide for anyone in the mining industry currently doing business or intending to do business in Indonesia Written by a highly regarded legal expert with deep experience in the Indonesian mining industry Combines all the relevant regulations in one comprehensive guide Ideal for professionals in the mining industry, as well as academics, government institutions, policy makers, and industry associations, Mining Law & Regulatory Practice in Indonesia is the perfect guide for an underserved market.

This monograph addresses the legal and policy issues relating to the commercial exploitation of natural resources in outer space. It begins by establishing the economic necessity and technical feasibility of space mining today, an estimate of the financial commitments required, followed by a risk analysis of a commercial mining venture in space, identifying the economic and legal risks. This leads to the recognition that the legal risks must be minimised to enable such projects to be financed. This is followed by a discussion of the principles of international space law, particularly dealing with state responsibility and international liability, as well as some of the issues arising from space mining activities. Much detail is devoted to the analysis of the content of the common heritage of mankind doctrine. The monograph then attempts to balance such interests in creating a legal and policy compromise to create a new regulatory regime.

This text is an ideal starting point to understand the regulatory regimes and policy challenges relevant to Australia's mining sector.

?The mining sector has been an integral part of economic development in many African countries. Although minerals have been exploited for decades in these countries, the benefits have not always been as visible. This has necessitated reforms including nationalisation of mining activities in the distant past; and currently legal and regulatory reforms. This book gives an insight of these reforms and with reference to the fieldwork research undertaken by the author in some African countries, the book highlights the social and environmental impacts of mining activities in Africa. The central question of the book is, why the mining laws have worked in some countries but not others and what can be done to ensure that these laws are effective? Consequently, the book analyses the legal reforms made in the sector and highlights both the challenges and the opportunities for foreign investors as well as the African governments and local communities. The book will be of great interest to researchers and students in Energy and Geography related fields, as well as to practitioners and policy makers.

This work analyzes and compares the legal framework for foreign investments in the mining sector in Australia, South Africa and Colombia. The admission of foreign investments, corporate structure requirements, ownership of minerals and mineral rights, mining licenses, land access, performance requirements, distribution of profits and the tax regime, repatriation of profits, national and international dispute resolution mechanisms and the question of the Social License to Operate (SLO) / Corporate Social Responsibility (CSR) policies are discussed in detail. The work concludes with an outlook on the future regulation of foreign mining investments and finally suggests the development of an International Mining Investment Law.
