This approach can improve both the experience and quality of care. Person-centred care relies on a number of aspects, including: people's values and putting people at the centre of care. taking into account people's preferences and chosen needs. ensuring people are physically comfortable and safe.

[Person-centred care - Prevention practice examples and...](#)

Put simply, being person-centred is about focusing care on the needs of the person rather than the needs of the service. Most people who need health care these days aren't happy just to sit back and let health care staff do what they think is best. They have their own views on what's best for them and their own priorities in life.

Key Message Person-centred care is providing care that is responsive to individual personal preferences, needs and values and assuring that patient values guide all clinical decisions. Person-centred care is one of the 3 core tenets of care in NHS Scotland where we strive to deliver “Person-centred, safe and effective care” to all.

Fundamentals of Person-Centred Healthcare Practice presents evidence-based perspectives on a broad range of approaches to person-centred practice in healthcare. Featuring contributions from internationally recognised experts in the field, this valuable textbook helps students and staff across healthcare disciplines understand the essential concepts of person-centred practice in various health-related contexts. Using the Person-centred Practice Framework—an innovative theoretical model based on more than two decades of research and practice—students develop a strong understanding of the different components of person-centredness, their connections and interactions, and how they can be implemented to promote positive healthcare experiences for care providers, service-users, and families. Recognising the dynamic and complex nature of person-centredness, the text emphasises the importance of a common language and a shared understanding of person-centred practice in all areas of healthcare, from hospital and social care systems, to mental health, learning disability, and rehabilitation services. This practical and insightful introduction to the subject. Provides engaging, student-friendly coverage of the central principles and practice of person-centredness within a multi-professional and interdisciplinary context Features cases and examples of person-centred practice in curricula worldwide Includes activities designed to support person-centred practitioner development

Discusses the future of person-centred facilitation, learning and practice Offers real-world guidance on providing a holistic approach to developing person-centred relationships that facilitate meaningful connections with others Fundamentals of Person-Centred Healthcare Practice is an indispensable resource for nursing and allied health professionals, and an important reference work for educators, facilitators, supervisors and healthcare practitioners.

Person-centered mental health care is essential for keeping service users at the center of care. This handbook uses practical examples across clinical care, research, education, and healthcare administration to illustrate how to implement person-centered approaches for clients with serious mental health challenges. Looking at the different service points that this growing population of clients encounter enables service providers to see how to implement holistic person-centered care in an effective manner. Each chapter follows a concrete case example exploring different techniques, tools, and resources that can be used by service users and service providers. An appendix provides the handouts in printable form. Written by experts in person-centered care with diverse experiences with mental health-related practices and policies, this comprehensive handbook is a valuable resource for psychiatrists and other mental health practitioners, researchers, educators, and policy makers who work with people with serious mental health challenges.

Person-Centred Healthcare Research provides an innovative and novel approach to exploring a range of research designs and methodological approaches aimed at investigating person-centred healthcare practice within and across healthcare disciplines. With contributions from internationally renowned experts in the field, this engaging resource challenges existing R&D methodologies and their relevance to advancing person-centred knowledge generation, dissemination, translation, implementation and use. It also explores new developments in research methods and practices that open up new avenues for advancing the field of person-centred practice. Person-Centred Healthcare Research: Enables students, practitioners, managers and researchers to gain a solid understanding of the complexity of person-centred thinking in research designs and methods. Explores the theories and practices underpinning a topical subject within current healthcare practice. Is edited by an internationally recognised team who are at the forefront of person-centred healthcare research.

Person-centred health care is increasingly endorsed as a key element of high-quality care, yet, in practice, it often means patient-centred health care. This book scrutinizes the principle of primacy of patient welfare, which, although deeply embedded in health professionalism, is long overdue for critical analysis and debate. It appears incontestable because patients have greater immediate health needs than clinicians and the patient-clinician encounter is often recognized as a moral enterprise as well as a service contract. However, Buetow argues that the implication that clinician welfare is secondary can harm clinicians, patients and health system performance. Revaluing participants in health care as moral equals, this book advocates an ethic of virtue to respect the clinician as a whole person whose self-care and care from patients can benefit both parties, because their moral interests intertwine and warrant equal consideration. It then considers how to move from values including moral equality in health care to practice for people in their particular situations. Developing a genuinely inclusive concept of person-centred care – accepting clinicians as moral equals – it also facilitates the coalescence of patient-centred care and evidence-based health care. This reflective and provocative work develops a constructive alternative to the taken-for-granted principle of primacy of patient welfare. It is of interest to students and academics in the health and caring sciences, philosophy, ethics, medical humanities and health management.

The idea of person-centred health systems is widely advocated in political and policy declarations to better address health system challenges. A person-centred approach is advocated on political, ethical and instrumental grounds and believed to benefit service users, health professionals and the health system more broadly. However, there is continuing debate about the strategies that are available and effective to promote and implement ‘person-centred’ approaches. This book brings together the world's leading experts in the field to present the evidence base and analyse current challenges and issues. It examines ‘person-centredness’ from the different roles people take in health systems, as individual service users, care managers, taxpayers or active citizens. The evidence presented will not only provide invaluable policy advice to practitioners and policymakers working on the design and implementation of person-centred health systems but will also be an excellent resource for academics and graduate students researching health systems in Europe.

Person-centred Practice in Nursing and Health Care is a comprehensive and practical resource for all nurses and healthcare practitioners who want to develop person-centred ways of working. This second edition which builds on the original text Person Centred Nursing, has been significantly revised and expanded to provide a timely and topical exploration of an important subject which underpins all nursing and healthcare, edited by internationally renowned experts in the field. Person-centred Practice in Nursing and Health Care looks at the importance of person-centred practice (PCP) from a variety of practice, strategic, and policy angles, exploring how the principles of PCP underpin a variety of perspectives, including within leadership and in the curriculum. The book explores not only a range of methodologies, but also covers a variety of different healthcare settings and contexts, including working within mental health services, acute care, nursing homes, the community, and working with children and people with disabilities. Key features: Significantly updated and expanded since the previous edition, taking into account the considerable changes in recent health care advancements, including the ‘Francis’ report Builds on previous perspectives of person-centredness in nursing and applies them in a broader nursing and health care context Includes a stronger exploration on the role of the service-user Shows the use of life-story and narrative approaches as a way of putting the individual's identity at the heart of the care relationship Includes learning features such as links to current practice developments and reflective questions

Patient-centered medicine is not an illness-centered, a physician-centered, or a hospital-centered medicine approach. In this book, it is aimed at presenting an approach to patient-centered medicine from the beginning of life to the end of life. As indicated by W. Osler, "It is much more important to know what sort of a patient has a disease than what sort of a disease a patient has." In our day, if the physicians and healthcare professionals could consider more than the diseased organ and provide healthcare by comforting the patients by respecting their values, beliefs, needs, and preferences; informing them and their relatives at every stage; and comforting the patients physically by controlling the pain and relieving their worries and fears, patients obeying the rules of physicians would become patients with high adaptation and participation to the treatment.

Patient-centered care is a way of thinking and doing things that considers patients partners in the development of a healthcare plan designed to meet their specific needs. It involves knowledge of the individual as a person and integrates that knowledge into their plan of care. Patient-centered care is central to the discussion of healthcare at the insurance and hospital-level. The quality of the service is evaluated more deeply from all the healthcare components, including insurance payments. It is the start of a new client- and patient-centered healthcare, which is based on a profound respect for patients and the obligation to care for them in partnership with them. Healthcare has been lacking a strategy to teach patients how to take care of themselves as much as they possibly can. In countries with socialized healthcare, patients don't go to the emergency room unless it is necessary; they have a physician on call instead. This affords more personalized care and avoids patients getting lost in the hospital system. This book advocates the critical role of patients in the health system and the need to encourage healthy living. We need to educate patients on how to be more self-aware, giving them the tools to better understand what they need to do to achieve healthy lifestyles, and the protocols and policies to sustain a better life. Prevention has always been the pinnacle of medical care. It's time to highlight and share this approach with patients and involve them as active participants in their own healthcare. This is the method on which to build the new healthcare for the next century.

Requirements for treatment planning in the mental health and addictions fields are long standing and embedded in the treatment system. However, most clinicians find it a challenge to develop an effective, person-centered treatment plan. Such a plan is required for reimbursement, regulatory, accreditation and managed care purposes. Without a thoughtful assessment and well-written plan, programs and private clinicians are subject to financial penalties, poor licensing/accreditation reviews, less than stellar audits, etc. In addition, research is beginning to demonstrate that a well-developed person-centered care plan can lead to better outcomes for persons served. * Enhance the reader's understanding of the value and role of treatment planning in responding to the needs of adults, children and families with mental health and substance abuse treatment needs * Build the skills necessary to provide quality, person-centered, culturally competent and recovery /resiliency-orientated care in a changing service delivery system * Provide readers with sample documents, examples of how to write a plan, etc. * Provide a text and educational tool for course work and training as well as a reference for established practitioners * Assist mental health and addictive disorders providers / programs in meeting external requirements, improve the quality of services and outcomes, and maintain optimum reimbursement
