An around-the-world journey to discover where in the wild we can find the elements of life and the surprising ways they're essential to our survival We all know that we depend on elements for survival—from the oxygen in the air we breathe to the carbon in the molecular structures of all living things. But we don't often stop to appreciate how, say, phosphorous holds our DNA together or how potassium powers our optic nerves so that we can see. In *The Elements We Live By*, physicist and award-winning author Anja Røyne takes us on an astonishing journey through chemistry and physics, introducing the building blocks from which we humans—and the world—are made. Not only does Røyne explain why our bodies need iron, phosphorus, silicon, potassium, and many more elements in just the right amounts in order to function, she also leads us around the world to where these precious elements are found (some of them in ever-shrinking quantities). You'll understand how precariously balanced our lives—and ways of life—really are, and you'll see these unsung heroes of the periodic table in an entirely new light.

*The Elements of Knowledge Organization* is a unique and original work introducing the fundamental concepts related to the field of Knowledge Organization (KO). There is no other book like it currently available. The author begins the book with a comprehensive discussion of "knowledge" and its associated theories. He then presents a thorough discussion of the philosophical underpinnings of knowledge organization. The author walks the reader through the Knowledge Organization domain expanding the core topics of ontologies,

taxonomies, classification, metadata, thesauri and domain analysis. The author also presents the compelling challenges associated with the organization of knowledge. This is the first book focused on the concepts and theories associated with KO domain. Prior to this book, individuals wishing to study Knowledge Organization in its broadest sense would generally collocate their own resources, navigating the various methods and models and perhaps inadvertently excluding relevant materials. This text cohesively links key and related KO material and provides a deeper understanding of the domain in its broadest sense and with enough detail to truly investigate its many facets. This book will be useful to both graduate and undergraduate students in the computer science and information science domains both as a text and as a reference book. It will also be valuable to researchers and practitioners in the industry who are working on website development, database administration, data mining, data warehousing and data for search engines. The book is also beneficial to anyone interested in the concepts and theories associated with the organization of knowledge. Dr. Richard P. Smiraglia is a world-renowned author who is well published in the Knowledge Organization domain. Dr. Smiraglia is editor-in-chief of the journal Knowledge Organization, published by Ergon-Verlag of Würzburg. He is a professor and member of the Information Organization Research Group at the School of Information Studies at University of Wisconsin Milwaukee.

Algedonic is an aesthetic outlook on pain and pleasure. Complex emotions simplified into poetic interludes as only r.h. Sin can express. With his trademark of giving simplicity to some of the hardest of emotions, Sin reminds us all that there are often two sides to an emotional story and sometimes the pain transforms into something beautiful, something less problematic and maybe something that reignites a feeling of pleasure.

A fascinating study of the modern state as a collection of associations and a tool that has to be given power by the people but musty follow checks and balances put in place. A relevant text when written and still relevant in this day.

First Betsy Taylor loses her job, then she's killed in a car accident. But what really bites is that she can't seem to stay dead. And now her new friends have the ridiculous idea that Betsy is the prophesied vampire queen, and they want her help in overthrowing the most obnoxious power-hungry vampire in five centuries.

"CNC programmers and service technicians will find this book a very useful training and reference tool to use in a production environment. Also, it will provide the basis for exploring in great depth the extremely wide and rich field of programming tools that macros truly are."--BOOK JACKET.

This book gathers into a single source all the legislative documents

preceding the coming into effect of The Directive 2004/18 of the European Parliament and the Council on the Coordination of Procedures for the Award of Public Works Contracts, Public Supply Contracts and Public Service Contracts. In great detail it clearly reveals the negotiation and compromise over the realisation of the legislative objectives - modernisation, simplification, and flexibility. The book first presents documents that outline the reasons that led to the intention to integrate public works (93/37/EEC), supply contracts (93/36/EEC), and service contracts (92/50/EEC) into one new directive. Then follow documents that detail the drafting of the recitals in the Preamble, the articles and the annexes. Finally, a list of legislative documents offers as complete an overview as possible of every item that played a role in the creation of Directive 2004/18/EC, including several amendments that have been made to the directive since it came into effect.

This report looks at the capacity and capabilities of civil servants of OECD countries and suggests approaches for addressing skills gaps through recruitment, development and workforce management

The theme permeating this book on assessment centers is "continuity and change", describing what has remained the same and what has changed in the 50-year history of the assessment center method. One of the important changes explored is the evolution of the goals of assessment center programs and the ways in which assessment centers and their component parts have been used. Assessment Centers in Human Resource Management clearly differentiates between assessment centers used for prediction, diagnoses, and development. In addition, this book explores: assessment centers and human resource management; court cases involving assessment centers; innovations in assessment center operations; cross-cultural considerations including diversity of the workforce; and assessor training. The target audience for the text includes students who are learning about assessment centers, practitioners including human resource managers and consultants who may be considering the implementation of assessment centers, and academicians who are researching the method and wish to understand current issues.

Who is designing AI? A select, narrow group. How is their world view shaping our future? Artificial intelligence can be all too human-quick to judge, capable of error, vulnerable to bias. It's made by humans, after all. Humans make decisions about the laws and standards, the tools, the ethics in this new world. Who benefits. Who gets hurt. Made by Humansexplores our role and responsibilities in automation. Roaming from Australia to the UK and the US, elite data expert Ellen Broad talks to world leaders in AI about what we need to do next. It is a personal, thought-provoking examination of humans as data and humans as the designers of systems that are meant to help us.
