Though bad at math and often monkey-minded, Shane Neeley became outstanding at coding and building intelligent, creative machines. The universe also underestimated the walking apes; the monkeys weren't supposed to make it to space or conjure AI with clicks on a keyboard. A paleolithic birth of creativity, driven by the same old evolutionary selection pressures, fashioned humankind into artists, poets, comedians, believers and scientists. Another epic transformation is happening today as people begin to build intelligent machines. This book is a must-read for anyone learning AI: coders, coders-to-be, or coders-adjacent!
