while sharing informative anecdotes, technical notes, and lighting diagrams.

Providing readers with a study of learning how to turn poorly lit images into finely crafted, masterfully lit photographs, this guidebook instills photographers with the self-confidence to think on their feet and photograph any portrait subject anywhere. Acclaimed photographer Neil van Niekirk presents seven distinctly different lighting scenarios—available light, exposure metering, a touch of flash, bounced on-camera flash, off-camera flash, video light, and hard sunlight—to show readers how to manipulate the direction and quality of light, the subject’s and photographer’s position, and numerous other variables so as to turn a bad image into a stunning, professional-level portrait. Packed with dozens of instructional, full-color photos, this work also features 10 sample photo sessions, allowing readers the opportunity to see the seven lighting scenarios put to practice.

Offers illustrated lessons on lighting for portrait photography, covering such topics as building light setups, adding hair and accent lights, and using meters.

- The relationships between light, subject, and background, and how to control them
- Lighting patterns such as Paramount, Rembrandt, loop, and split
- Lighting ratios and how they affect contrast in your image
- Equipment: from big and small modifiers to grids, snoots, barn doors, flags, and gels
- Multiple setups for portrait shoots, including those that utilize one, two, and three lights
