The Mating Mind (2000) — Geoffrey Miller, Ph.D.

4 THE MATING MIND The human mind's most impressive abilities are like the peacock's tail: they are courtship tools, evolved to attract and entertain sexual partners. By shifting our attention from a survival-centered view of evolution to a courtship-centered view, I shall try to show how, for the first time, we can understand

The Mating Mind - OnTherapy Editia a IV-a

Geoffrey Miller's The Mating Mind is one of the best books on human psychology ever written--on my list, he comes just after Dawkins' The Selfish Gene and Pinker's How the Mind Works. This is more than just a book about the psychology of sex.

The Mating Mind: How Sexual Choice Shaped the Evolution of ...

The Mating Mind: How Sexual Choice Shaped the Evolution of Human Nature. Geoffrey Miller. At once a pioneering study of evolution and an accessible and lively reading experience, The Mating Mind marks the arrival of a prescient and provocative new science writer. Psychologist Geoffrey Miller offers the most convincing – and radical – explanation for how and why the human mind evolved.

The Mating Mind: How Sexual Choice Shaped the Evolution of ...

In very intellectual circles, it might be suspected that THE MATING MIND by Geoffrey F. Miller is the most highly scientific book on "How Sexual Choice Shaped the Evolution of Human Nature," as the subtitle puts it.

At once a pioneering study of evolution and an accessible and lively reading experience, The Mating Mind marks the arrival of a prescient and provocative new science writer. Psychologist Geoffrey Miller offers the most convincing – and radical – explanation for how and why the human mind evolved.

Consciousness, morality, creativity, language, and art: these are the traits that make us human. Scientists have traditionally explained these qualities as merely a side effect of surplus brain size, but Miller argues that they were sexual attractors, not side effects. He bases his argument on Darwin's theory of sexual selection, which until now has played second fiddle to Darwin's theory of natural selection, and draws on ideas and research from a wide range of fields, including psychology, economics, history, and pop culture. Witty, powerfully argued, and continually thought-provoking, The Mating Mind is a landmark in our understanding of our own species.

The #1 bestselling pioneer of "fratire" and a leading evolutionary psychologist team up to create the dating book for guys. Whether they conducted their research in life or in the lab, experts Tucker Max and Dr. Geoffrey Miller have spent the last 20+ years learning what women really want from their men, why they want it, and how men can deliver those qualities. The short answer: become the best version of yourself possible, then show it off. It sounds simple, but it's not. If it were, Tinder would just be the stuff you use to start a fire. Becoming your best self requires honesty, self-awareness, hard work and a little help. Through their website and podcasts, Max and Miller have already helped over one million guys take their first steps toward Ms. Right. They have collected all of their findings in Mate, an evidence-driven, seriously funny playbook that will teach you to become a more sexually attractive and romantically successful man, the right way: No "seduction techniques," No moralizing, No bullshit. Just honest, straightforward talk about the most ethical, effective way to pursue the win-win relationships you want with the women who are best for you. Much of what they've discovered will surprise you, some of it will not, but all of it is important and often misunderstood. So listen up, and stop being stupid!

Until recently, evolutionary psychologists have considered human mating behavior to be universal and similar to other animals, painting a picture of human mating as visceral, animalistic, and instinctual. But that's not the whole story. In courtship and display, sexual competition and rivalry, we are guided by

Mating Intelligence, or the range of psychological abilities designed for sexual reproduction. In this book, psychologists Glenn Geher and Scott Barry Kaufman take a fascinating tour of the intersection of intelligence and mating by drawing on cutting-edge research on evolutionary psychology, intelligence, creativity, personality, social psychology, developmental psychology, neuroscience, epigenetics, and more. This book will change the way you think about sex, dating, love, and the human mind.

Human intelligence is sexually attractive, and strongly predicts the success of sexual relationships, but the behavioral sciences have usually ignored the interface between intelligence and mating. This is the first serious scholarly effort to explore that interface, by examining both universal and individual differences in human mating intelligence. Contributors include some of the most prominent evolutionary psychologists and promising new researchers in human intelligence, social psychology, intimate relationships, and sexuality. David Buss' foreword and the opening chapter explore what 'mating intelligence' means, and why it is central to human cognition and sexuality. The book's six sections then examine (1) our mating mechanisms -- universal emotional and cognitive adaptations for mating intelligently -- that guide mate search, mate choice, and courtship; (2) how mating intelligence strategically guides our choice of mating tactics and partners given different relationship goals, personality traits, forms of deception, and the existence of children; (3) the genetic and psychiatric causes of individual differences in mating intelligence; (4) how we use mental fitness indicators -- forms of human intelligence such as creativity, humor, and emotional intelligence -- to attract and retain sexual partners; (5) the ecological and social contexts of mating intelligence; (6) integrative models of mating intelligence that can guide future research. Mating Intelligence is intended for researchers, advanced students, and courses in human sexuality, intimate relationships, intelligence research, behavior genetics, and evolutionary, personality, social, and clinical psychology.

What do the Volkswagen T2a Bus, the contraceptive pill and Jimi Hendrix have in common? Why does a cold and dry environment make people more likely to speak to strangers? What can World of Warcraft teach us about the world we live in today? In this brilliantly original, provocative and witty book, Geoffrey Miller - acclaimed author of *The Mating Mind* - takes us on a journey through the surreal wonderlands of marketing, advertising, and media to explore the hidden instincts behind our choices. Combining this with the latest developments in evolutionary psychology, genetics and consumer research, he explains why we buy what we buy and how we can escape the excesses of twenty-first century consumerism.

Explores how evolutionary psychology has begun to identify the prehistoric origins of human behavior and discusses how those discoveries have influenced the way consumer spending is viewed and controlled by companies, retailers, and marketers.

Biodiversity-the genetic variety of life-is an exuberant product of the evolutionary past, a vast human-supportive resource (aesthetic, intellectual, and material) of the present, and a rich legacy to cherish and preserve for the future. Two urgent challenges, and opportunities, for 21st-century science are to gain deeper insights into the evolutionary processes that foster biotic diversity, and to translate that understanding into workable solutions for the regional and global crises that biodiversity currently faces. A grasp of evolutionary principles and processes is important in other societal arenas as well, such as education, medicine, sociology, and other applied fields including agriculture, pharmacology, and biotechnology. The ramifications of evolutionary thought also extend into learned realms traditionally reserved for philosophy and religion. The central goal of the *In the Light of Evolution (ILE)* series is to promote the evolutionary sciences through state-of-the-art colloquia-in the series of Arthur M. Sackler colloquia sponsored by the National Academy of Sciences-and their published proceedings. Each installment explores evolutionary perspectives on a particular biological topic that is scientifically intriguing but also has

Read Book The Mating Mind How Sexual Choice Shaped The Evolution Of Human Nature How Sexual Choice Shaped Human Nature

special relevance to contemporary societal issues or challenges. This tenth and final edition of the In the Light of Evolution series focuses on recent developments in phylogeographic research and their relevance to past accomplishments and future research directions.

The groundbreaking, provocative book that uses evolutionary psychology to explain human mating and the mysteries of love. If we all want love, why is there so much conflict in our most cherished relationships? To answer this question we must look into our evolutionary past, argues prominent psychologist David M. Buss. Based on one of the largest studies of human mating ever undertaken, encompassing more than 10,000 people of all ages from thirty-seven cultures worldwide, *The Evolution of Desire* is the first work to present a unified theory of human mating behavior. Drawing on a wide range of examples of mating behavior -- from lovebugs to elephant seals, from the Yanomamö tribe of Venezuela to online dating apps -- Buss reveals what women want, what men want, and why their desires radically differ. Love has a central place in human sexual psychology, but conflict, competition, and manipulation also pervade human mating -- something we must confront in order to control our own mating destiny. Updated to reflect the very latest scientific research on human mating, this definitive edition of this classic work of evolutionary psychology explains the powerful forces that shape our most intimate desires.

Sex is as fascinating to scientists as it is to the rest of us. A vast pool of knowledge, therefore, has been gleaned from research into the nature of sex, from the contentious problem of why the wasteful reproductive process exists at all, to how individuals choose their mates and what traits they find attractive. This fascinating book explores those findings, and their implications for the sexual behaviour of our own species. It uses the Red Queen from 'Alice in Wonderland' -- who has to run at full speed to stay where she is -- as a metaphor for a whole range of sexual behaviours. The book was shortlisted for the 1994 Rhone-Poulenc Prize for Science Books. 'Animals and plants evolved sex to fend off parasitic infection. Now look where it has got us. Men want BMWs, power and money in order to pair-bond with women who are blonde, youthful and narrow-waisted ... a brilliant examination of the scientific debates on the hows and whys of sex and evolution' Independent.

An unparalleled exploration of the mysteries underlying women's sexuality that rivals the culture-shifting Kinsey Report, from two of America's leading research psychologists Do women have sex simply to reproduce or display their affection? When University of Texas at Austin clinical psychologist Cindy M. Meston and evolutionary psychologist David M. Buss joined forces to investigate the underlying sexual motivations of women, what they found astonished them. Through the voices of real women, Meston and Buss reveal the motivations that guide women's sexual decisions and explain the deep-seated psychology and biology that often unwittingly drive women's desires—sometimes in pursuit of health or pleasure, or sometimes for darker, disturbing reasons that a woman may not fully recognize. Drawing on more than a thousand intensive interviews conducted solely for the book, as well as their pioneering research on physiological response and evolutionary emotions, *Why Women Have Sex* uncovers an amazingly complex and nuanced portrait of female sexuality. They delve into the use of sex as a defensive tactic against a mate's infidelity (protection), as a ploy to boost self-confidence (status), as a barter for gifts or household chores (resource acquisition), or as a cure for a migraine headache (medication). *Why Women Have Sex* stands as the richest and deepest psychological understanding of female sexuality yet achieved and promises to inform every woman's (and her partner's) awareness of her relationship to sex and her sexuality.
